

ACCELERATE DEVELOPER PRODUCTIVITY WITH GITHUB AND MODERN ENGINEERING

Looking to improve developer productivity? Feeling pressure to innovate and simultaneously maintain application security, stability and reliability? Achieve these objectives by adopting **GitHub** and implementing modern engineering practices with InCycle. Our best customers seek to automate development pipelines with actions + packages, defend code against vulnerabilities and accelerate developer productivity with GitHub **Copilot**, **Advanced Security**, **Codespaces** and **Insights**. As an accredited GitHub partner, InCycle can help you implement and achieve your modern engineering goals.

GitHub Verified Partner

Migration Acceleration

Provide proven patterns and tools to move faster from other repository providers (e.g., **GitLab**, **BitBucket**) and mitigate problems.

CI/CD Modernization

Achieve modernize integration and deployment with **GitHub Actions** including runners, scale sets, and governance to increase velocity.

Advanced Security (GHAS)

Enhance Security with **GHAS** at scale using **Dependabot**, code and secret scanning, standards, and reporting.

Developer Productivity

Implement DevOps patterns and practices (e.g., platform engineering) using GitHub repositories, CI/CD with GitHub Actions & GitHub Packages for artifact management.

GitHub Copilot

Maximize developer experience by adopting **GitHub Copilot** with AI-powered code suggestions. Boost development and job satisfaction simultaneously!

Advisory & Training

Leverage office hours and expert coaching to cover implementation, developer workflow, and general GitHub topics.

“InCycle helped us modernize our DevOps practices and improve code security with GitHub. This eliminated costly and error-prone manual tasks and decreased our vulnerability exposure. Not only did we improve productivity, but we also sleep better!”
